## **CLAIMS**

## What is claimed is:

- 1. A security method for transmission to a remote device of data input into a transaction terminal as clear text data, comprising the steps of:
  - (a) comparing a data entry prompt for entry of data into the transaction terminal to prompts in a secure prompt table;
  - (b) determining that the data entry prompt is a secure prompt upon the occurrence of any of the conditions of:
    - (i) the data entry prompt matching at least one of the prompts in the secure prompt table,
    - (ii) the data entry prompt matching only a portion of any of the secure prompts in the secure prompt table, and
    - (iii) any of the prompts in the secure prompt table matching only a portion of the data entry prompt; and
  - (c) transmitting the data entered into the transaction terminal in response to the data entry prompt as clear text data only upon the determination that the data entry prompt is a secure prompt.

- 2. A security method for transmission to a remote device of data input into a transaction terminal as clear text data, comprising the steps of:
  - (a) comparing a data entry prompt for entry of data into the transaction terminal to prompts in a secure prompt table;
  - (b) determining that the data entry prompt is a secure prompt upon the occurrence of any of the conditions of:
    - (i) the data entry prompt matching any prompt in the secure prompt table, and
    - (ii) the data entry prompt matching only a portion of any prompt in the secure prompt table; and
  - (c) transmitting the data entered into the transaction terminal in response to the data entry prompt as clear text data only upon the determination that the data entry prompt is a secure prompt.
- 3. The method of claim 2, wherein the step of determining that the data entry prompt is a secure prompt includes also doing so when any prompt in the secure prompt table matches only a portion of the data entry prompt.

- 4. A security method for transmission to a remote device of data input into a transaction terminal as clear text data, comprising the steps of:
  - (a) comparing a data entry prompt for entry of data into the transaction terminal to prompts in a secure prompt table;
  - (b) determining that the data entry prompt is a secure prompt upon the occurrence of any of the conditions of:
    - (i) the data entry prompt matching any prompt in the secure prompt table, and
    - (ii) any prompt in the secure prompt table matching only a portion of the data entry prompt; and
    - (c) transmitting the data entered into the transaction terminal in response to the data entry prompt as clear text data only upon the determination that the data entry prompt is a secure prompt.
  - 5. The method of claim 4, wherein the step of determining that the data entry prompt is a secure prompt includes also doing so when the data entry prompt matches only a portion of any prompt in the secure prompt table.

- 6. In a personal identification number entry device, a clear text data transmission security method, comprising the steps of:
  - (a) the personal identification number entry device receiving a data entry prompt for the entry of data from a remote device followed by a command from the remote device for entry of data into the personal identification number entry device;
  - (b) the personal identification number entry device comparing the data entry prompt to a plurality of secure prompts and determining that the data entry prompt is a secure prompt upon the occurrence of any of the conditions of
    - (i) the data entry prompt matching any of the secure prompts, and
    - (ii) the data entry prompt matching only a portion of any of the secure prompts;
  - (c) the personal identification number entry device accepting the data entry command only upon the determination that the data entry prompt is a secure prompt.
  - 7. The method of claim 5, wherein the step of determining that the data entry prompt is a secure prompt includes also doing so when any of the secure prompts matches only a portion of the data entry prompt.

- 8. In a personal identification number entry device, a clear text data transmission security method, comprising the steps of:
  - (a) the personal identification number entry device receiving a data entry prompt for the entry of data from a remote device followed by a command from the remote device for entry of data into the personal identification number entry device;
  - (b) the personal identification number device comparing the data entry prompt to a plurality of secure prompts and determining that the data entry prompt is a secure prompt upon the occurrence of any of the conditions of:
    - (i) the data entry prompt matching any of the secure prompts, and
    - (ii) any of the secure prompts matching only a portion of the data entry prompt; and
  - (c) the personal identification number device accepting the data entry command only upon the determination that the data entry prompt is a secure prompt.

10

- 9. The method of claim 8 wherein the step of determining that the data entry prompt is a secure prompt includes also doing so when the data entry prompt matches only a portion of any of the secure prompts.
  - 10. In a data entry device that displays a data entry prompt received from a remote device and transmits data input into the data entry device in response to the data entry prompt as clear text data only if the data entry prompt is a secure prompt, an improved method of determining whether the data entry prompt is a secure prompt, comprising the steps of:
    - (a) comparing the data entry prompt with prompts in a secure prompts table; and
    - (b) determining that the data entry prompt is a secure prompt upon the occurrence of any of the conditions of:
      - (i) the data entry prompt matching any prompt in the secure prompt table,
      - (ii) the data entry prompt matching only a portion of any prompt in the secure prompt table, and
      - (iii) any prompt in the secure prompt table matching only a portion of the data entry prompt.

15

20

- 11. The method of claim 10 wherein the data entry device comprises a personal identification number entry device.
- data entry prompt received from a remote device and transmits data input into the data entry device in response to the data entry prompt as clear text data only if the data entry prompt is a secure prompt, an improved method of determining whether the data entry prompt is a secure prompt, comprising the steps of:
  - (a) storing a plurality of secure prompts in a secure prompt table in memory of the personal identification number entry device;
  - (b) comparing the data entry prompt with the secure prompts stored in the secure prompt table; and
  - (c) determining that the data entry prompt is a secure prompt upon the occurrence of any of the conditions of:
    - (i) the data entry prompt matching any secure prompt in the secure prompt table,
      - (ii) the data entry prompt matching only a portion of any secure prompt in the secure prompt table, and
      - (iii) any secure prompt in the secure prompt table matching only a portion of the data entry prompt.
